

# EQUIPMENT REPAIR & OVERHAUL SERVICES

Now more than ever, energy companies are under continued pressure to optimise the performance of their essential equipment to maximise productivity, reduce maintenance downtime and lower their carbon footprint towards a net zero future.

As a specialist provider of engineering and integrity services to the international energy sector for several decades, Glacier Energy Services has a wealth of experience in the provision of repair, refurbishment and overhaul services to drive down the cost of ownership and mitigate operational risks to reduce life cycle costs.

Our experienced in-house team can re-engineer your critical operational assets that are inefficient, but still in operation. Through our ability to reverse engineer and refurbish key components & equipment, we can help clients save significant costs by extending the life of the asset and ensuring there is no need for a major shut-down.

# EXPERIENCED SOLUTIONS PARTNER

As a solutions partner, we offer a complete aftermarket and repair service for a wide range of industrial equipment such as valves, pumps and rotating equipment for the oil & gas, nuclear, petrochemical, power and utility industries.

Glacier's repair and refurbishment capability complements our broad portfolio of additional on-site technical services including machining, welding, inspection and heat transfer solutions. This blend of integrated and value-added services ensures our clients' engineering and asset integrity work scopes can be delivered more safely, reliably and cost-effectively, all through a single-source provider.

**Glacier Energy Services is ideally placed to help clients repair and refurbish to the highest standard, increasing asset service life, reducing capital costs and improving profitability."**
