

Track Record

Below is a selection of projects that showcases our capability and experience in the provision of welding solutions, including weld overlay and welding fabrication.

Welding Solutions

CLIENT	REGION	WORKSCOPE
OEM	UK	Deposition of hard facing weld metal on valve component areas where wear resistant properties are required such as metal to metal sealing areas
OEM	UK	Qualification of project specific welding procedure & production welding for LAS butter weld deposition on weld preparation ends of low alloy steel subsea components
Refinery Operator	UK	Refurbishment of existing inlet and outlet elbow spool assemblies for refinery reactor vessel
OEM	UK	Develop, qualify and implement productivity improvements to welding process for deposition of corrosion resistant weld overlay on surface and subsea valves and related components
International Valve Manufacturer	UK	Due to poor performance in-house, Glacier became the client's out-sourced partner for complete welding provision services
Multinational Equipment Provider	UK	Glacier designed subsea swivels to allow corrosion resistant weld overlay to be deposited on areas of the swivels to protect against exposure to subsea environments
Tier 1 Subsea Construction Company	UK	Manufacture, inspection and testing of weld deposited CRA overlay on carbon steel pup-pieces to be used for HSP power fluid and water injection midline tie-in joints
